

Base url: <https://api-mu-ten-54.vercel.app>

2. API endpoints

Method	Endpoint	What it does
GET	/api/health	Check if API is running
GET	/api/reports	Get all pothole reports
GET	/api/reports/:id	Get one report by ID
POST	/api/reports	Upload image + metadata
PATCH	/api/reports/:id	Update a report
DELETE	/api/reports/:id	Delete a report

3. Example: get all reports

```
fetch('https://api-mu-ten-54.vercel.app/api/reports')
  .then(res => res.json())
  .then(data => console.log(data.reports));
```

4. Example: upload an image

```
const formData = new FormData();
formData.append('image', imageFile);
formData.append('metadata', JSON.stringify({
  detections: [{ label: 'pothole', confidence: 0.87 }]
}));
formData.append('severity', 'high');
formData.append('status', 'pending');
fetch('https://api-mu-ten-54.vercel.app/api/reports', {
  method: 'POST',
  body: formData
});
```

5. What each report looks like

```
{
  "id": "79b968d9-4348-4e56-89a5-a452b3e24aec",
  "image_url": "https://...supabase.co/.../original/photo.jpg",
  "annotated_image_url": "https://...supabase.co/.../annotated/photo.jpg",
  "metadata": {
    "detections": [
      { "label": "Pothole", "confidence": 0.68, "model": "M1", "bbox": [10, 20, 100,
200] }
    ]
  },
  "severity": "high",
  "status": "pending",
  "latitude": null,
  "longitude": null,
  "created_at": "2026-07-17T02:00:07.492272+00:00"
}
```

Safe to share (for normal app/dashboard use)

1. Project URL

```
https://vueblplwhhfqwwmvahwa.supabase.co
```

From: Supabase → Data API → Project URL
(Use this only — not the `/rest/v1/` URL.)

2. Publishable key

```
sb_publishable_... (from your saved keys)
```

From: Supabase → Settings → API Keys → Publishable key
This is the key meant for apps (dashboard, frontend, etc.).

3. Database info

Item	Value
Table name	pothole_reports
Storage bucket	pothole-images
Schema	public

4. Table columns

Column	Type	What it is
id	uuid	Unique report ID
created_at	timestamp	When it was created
image_url	text	Link to original image
annotated_image_url	text	Link to image with boxes
metadata	jsonb	Detection JSON
latitude	float	GPS lat (optional)
longitude	float	GPS lng (optional)
severity	text	critical / high / medium / low
status	text	pending / in_progress / repaired
notes	text	Optional notes

Example: connect with JavaScript

```
import { createClient } from '@supabase/supabase-js'
const supabase = createClient(
  'https://vueblplwhhfqwwmvahwa.supabase.co',
  'sb_publishable_YOUR_KEY_HERE'
)
// Get all reports
const { data, error } = await supabase
  .from('pothole_reports')
  .select('*')
  .order('created_at', { ascending: false })
```

Example: read images from storage

```
// List files in bucket
const { data, error } = await supabase.storage
  .from('pothole-images')
  .list('original')
```

Supabase connection info:

- URL: `https://vueblplwhhfgwmmvahwa.supabase.co`
- Publishable key: `[paste from your Google Doc]`
- Table: `pothole_reports`
- Storage bucket: `pothole-images`
- Docs: <https://supabase.com/docs/reference/javascript/introduction>

Vercel API vs Supabase — which should they use?

Goal	Use
Upload images + save reports the standard way	Vercel API
Read reports directly in dashboard	Either (Supabase is simpler for reads)
Real-time updates, direct DB queries	Supabase directly

Many teams use Supabase for reading (dashboard map) and Vercel API for uploading (after detection).
